- India(Kashmir)

Education

- Bachlors in Computer Science(BCA) in tier 3 collage from kashmir University.

Complitation Year: 2023

Technical Skills

- Javascript/Typescript
- **Data structures and Algorithms(C++)**
- React.js — Experienced in building dynamic, component-based user interfaces with hooks, **context API**, and **state management** libraries **(Zustand)**. Skilled in optimizing performance through memoization, **lazy loading**, and code splitting. Strong understanding of component lifecycle, **custom hooks**, and building reusable, scalable UI architectures.
- Next JS + Typescript **Server-Side Rendering** (SSR), **Static Site Generation (SSG)**, Incremental Static Regeneration **(ISR)**, Client Side Rendring **(CSR)**, **API Routes**, Middleware, **dynamic routing**, image/font optimization. Experience with **authentication**(Custom Authentication system, Oauth, AuthJS)
- **Auth.js, and Better Auth. Authentication** — Strong hands-on experience implementing secure authentication systems using **OAuth, JWT**, and **session-based flows**, along with custom auth solutions built from scratch. Skilled across multiple providers and libraries including **Clerk**, **Supabase Auth, Firebase Auth, Auth.js, and Better Auth** — choosing the right approach based on project needs, scalability, and security requirements.
- **Node Js | Express | socket.io**
- **Databases** (MongoDB, Postgress, Supabase, Firebase) with ORM like (Mongoose, Prisma and Drizzle)
- **Linux** — Comfortable working in Linux environments for development and deployment, including shell scripting and basic server configuration.
- **Redis** — Used Redis for caching and rate limiting to improve application performance and reduce database load.
- **Docker** — Experienced in containerizing full-stack applications using Dockerfiles and Docker Compose for consistent development and deployment.
- Deployment Vercel, Netlify, Cloudflare Pages
  GitHub Pages, GitHub Actions
  CI/CD Pipelines
- AI-Assisted Development (Claude Code, Copilot, ChatGPT(CodeX), Cursor)

Proof of work and Projects

Lokalhost.io (Full stack SASS Product)

Built and maintain Localhost.io, a full-stack SaaS product providing production-ready web components, templates, auth components, and scalable code solutions.

https://lokalhost-io-i2di.vercel.app/

Snaplink (URL Shortner Free)

SnapLnk.io — Full-stack URL shortener platform with bio pages, QR code generation, and click analytics (geolocation-based). Built with Next.js, Supabase.

https://snaplnk-gold.vercel.app/

Lokalhost.io — Mobile Design & App SaaS Platform

Build the Mobile ecosystem UI Blocks, Components, Apps screens and Designs with localhost.io

https://lokalhost-io-i2di.vercel.app/mobile

Rate Limiter Service | Rust, Axum, Redis, Tokio

Built a self-hostable Rust rate-limiting service using Axum with fixed-window, sliding-window, and token-bucket algorithms.
Implemented atomic Redis Lua request counting to prevent race conditions under concurrent load.

Currently working
